# SALES CONTINUE TO INCREASE AFTER MIDSUMMER SLOWDOWN

## CHAPTER 1

### SETTING UP TELEPAINT

## **Using TelePaint You Will Need . . .**

1. An IBM or compatible personal computer with 640K of memory and either a VGA, EGA, CGA or Hercules display adapter.
2. DOS 3.1 or above.
3. A mouse or other pointing device with a Microsoft compatible driver.

## **Before You Begin**

Before you can use TelePaint you must configure it for the type of display adapter you are using by running the TelePaint installation utility TPINSTAL.

To install TelePaint on a hard disk:

Insert the TelePaint diskette in Drive A.

Make a subdirectory for TelePaint on the hard disk.  
`md c:\tpaint <Enter>`

Copy all of the TelePaint files to the hard disk.  
`copy a:*. * c:\tpaint <Enter>`

Change to the TelePaint directory.  
`cd c:\tpaint <Enter>`

Run TPINSTAL to configure TelePaint.  
`pinstal <Enter>`

You can use TPINSTAL at any time to reconfigure TelePaint.

To use TelePaint from a floppy disk refer to the README.DOC file on the TelePaint diskette.

## Using the Mouse

There are words and symbols used in this TelePaint manual to indicate specific actions:

- **Clicking** is pressing and releasing a mouse button.
- **Double-clicking** is two quick consecutive clicks.
- **Dragging** is moving the mouse with a mouse button held down.
- **Selecting** is done by placing the cursor over an icon or key and clicking.

## Other Terms

- **Icons** are the symbols used to represent tools or functions.

- **Keys** are used in Pop-Up menus.

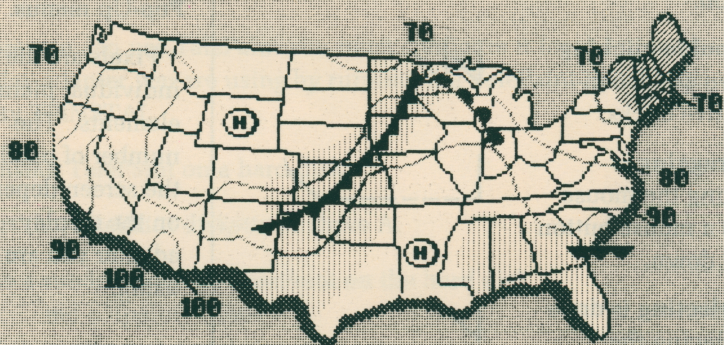

- **Pixels** are the individual picture elements. The number of pixels on the screen depends on the display adapter you are using.

**NOTE:** On a mouse with more than one button, all the buttons do the same thing.

WEATHER - 8 p.m., EDT, August 15

## CHAPTER 2

### LEARNING TELEPAINT

## Starting TelePaint

1. Install your mouse driver according to the directions provided by the pointing device manufacturer.
2. Change to the TelePaint directory.  
`cd \tpaint <Enter>`
3. Type "tpaint" and press <Enter>. Your screen should look like this:

## The TelePaint Screen

When you first start TelePaint, the TelePaint logo will appear in the center of the screen. If you click the mouse button or wait for 10 seconds, the TelePaint logo will automatically disappear.

Move your mouse or other pointing device and watch how the cursor moves. For clarity from here on we'll refer to your pointing device generically as a mouse. Notice the Pen Icon is highlighted in the menu. This tells you that the Pen is your current tool. The cursor is the shape of a pen. Try "dragging" (hold down a mouse button) the mouse around the screen to see how the Pen works.

The Color Menu will appear at the bottom of the screen when you start the program.

### The Icon Menu

The Icon Menu contains the tools you need to create pictures.

### The Color Menu

The Color Menu has the 2, 16 or 256 colors that you can draw with on your display adapter.

### The Cursor

The Cursor is the pointer on the screen that moves with the mouse. It takes on different shapes depending on what tool you are using. The lower left corner of the cursor is the "hot spot" for most of the cursors. This is the exact pixel where the tool will start to operate.

- Choosing the Air-brush gives you the cursor:

- Choosing the Filled-Rectangle gives you the cursor:

- Choosing the Pen gives you the cursor:

for single pixel tips,  
or

which shows the  
current tip.

## The Canvas

The Canvas is the complete drawing area. It is the size of the screen and prints in an 8 1/2 by 11 inch landscape format.

Use the <F1> key on the keyboard to remove the menus from the screen. Pressing <F1> again will re-display the menus.

Use the <F2> key on the keyboard to remove the color or tip and pattern menu from the bottom of the screen.

## Menu Controls

Click on the Current Pattern Icon to select the Tip and Pattern Menu.

Click on the Current Color Icon to select the Color Menu.

To turn the bottom menus on or off click the bar below the Current Pattern Icon.

## Clearing

Double-click the **Eraser Icon** to clear the whole Canvas

## The Color Menu

## The Tip and Pattern Menu

The Tip and Pattern Menu has selections for a current tip and pattern.

## Pull-Down Menus

Pull-Down Menus appear when certain icons are dragged downward.

Typeface, Airbrush size, Stamp type, Eraser size, Fill type, and Accessories are selected from Pull-Down Menus. The checkmark indicates the previous selection. Drag over the option you want, then release the mouse button to select it and return to the screen.

As you move each option is highlighted to help you identify it.

new selection

previous selection

## Pop-Up Menus

Pop-Up Menus appear when their icon is selected. Select options in a Pop-Up by clicking the boxes or the "keys".

Some boxes in a Pop-Up let you enter filenames or path names. To use one of these, first click the mouse button while pointing to the box with the cursor, then type at the keyboard the name you want to enter.

To leave a Pop-Up, select one of the keys (yes/no). You cannot select another tool until you have left the Pop-Up. Clicking outside the border of a Pop-Up is the same as clicking the "no" key.
